## A RESPONSIBLE PATH TO RENEWABLE HEAT

Project Carbon Freedom seeks to advance clean energy legislation that supports the deployment of renewable liquid heating fuel in order to expediently, affordably and equitably decarbonize the residential heating sector across the northeastern United States.

Our coalition is comprised of American heating oil dealers in the Northeast and farmers in the Midwest who support the scientific community's assessment that advanced liquid biofuels are essential in order to quickly, safely, and affordably transition our country to a carbon-free economy.

[New England's decarbonization] success would come earlier if the oil and gas industry uses its capabilities and workforce to advance net-zero solutions while avoiding stranded workers, stranded communities, and stranded assets.

**Ernest J. Moniz**

*Former US Secretary of Energy  
Founder, MIT Energy Initiative*

## WE NEED YOUR HELP

Across the Northeast, well-intentioned climate change policies include phasing out carbon-intensive fuels, including home heating oil, through policies that would put thousands of local family companies out of business, and homeowners in the hands of a few large utility companies for their home heating needs.

As an alternative to policy-driven electrification, renewable liquid heating fuel:

- Supports small businesses and farmers.
- Utilizes billions of dollars in existing assets, supply chain infrastructure, and a workforce of more than 160,000 heating fuel professionals to deliver a commercially viable advanced biofuel already in use today.
- Protects homeowners from the substantial costs and inadequate cold-weather performance of electric heat pumps.
- Promotes environmental justice, fuel security and jobs in our communities.
- Reduces GHG emissions immediately, rather than waiting on the decades-long decarbonization of the power grid.
- Takes a significant burden off the region's electric grid as it struggles to meet increasing winter demand with seasonally hamstrung renewables.

For more on how this issue will impact you, visit [www.projectcarbonfreedom.com](http://www.projectcarbonfreedom.com).

To sign a petition in support of including renewable liquid heating fuel as part of common-sense clean energy policy in our state, **text PCF to 52886**.
